## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a ground fault housing structure, classified in class 335, subclass 202.
- II. Claims 9-15, drawn to a ground fault latching structure, classified in class 335, subclass 18.
- III. Claims 16-20, drawn to a ground fault contact connection arrangement, classified in class 361, subclass 42.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a housing for a GFCI not using the reset latching structure of II or the connection arrangement of III, invention II has separate utility such as a reset latching structure for a GFCI not using the housing of I or the of III, invention I has separate utility such as a reset connection arrangement housing for a GFCI not using the housing of I or the reset latching structure of II. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
